

Advantages of Ventiflex

The Ventiflex Fan Connector is the optimum connection piece from the fan to the main duct. The dynamic pressure loss caused by the expanding angle will be regained as static pressure.

Installation

The Ventiflex Fan Connector comes complete with a longitudinal ducting rib equipped with eyelets for every 500mm and suspension hooks for every metre. The ducting connection to the fan outlet is secured by a strap. The connection to the main duct system uses a Ventiflex coupling.

Options and Accessories

- Strap for securing fan
- The Fan Connector can be equipped with additional ribs for terrain anchoring in windy areas. This will avoid damages caused by stormy weather when the fan is not running.
